

## A Reading Problem Checklist

- Takes "hours to do a few minutes of homework."
- Skips words/lines while reading.
- Overlooks or mis-reads short words.
- Rubs eyes, has red eyes or headache in the afternoon.
- Poor concentration when reading.
- Cannot comprehend reading material. Has to re-read to understand the meaning.
- Falls asleep or gets tired when reading.
- Slow/hesitant reading even when re-reading material.
- Attention span shortens when doing intense close up work.
- Must use finger or marker to hold place when reading.

**Want to find a solution to these problems?  
Then you have come to the right place.**

# The Vision & Learning Link

**Students spend more than 75 percent of school time doing INTENSE, visual work less than a FOOT from their eyes! However, not all students' vision can handle that intense workload. Thus, VISION is an often overlooked component of learning and reading problems.**

**Here is a fun workshop that will give you practical tools to help children who are having trouble with learning.**

**This workshop will show you:**

**How to identify children whose vision restricts learning  
How the way children "see" the world affects their behavior  
How to build school performance by enhancing vision  
How & why vision development therapy works to improve vision**

**You are invited to a special workshop for parents, educators, and professionals.**

**This Event is ENTIRELY FREE!**

**Please let us know in advance that you are coming so we can have enough refreshments available.**
